

The Dispatch app streamlines work order management and asset maintenance for municipalities and utility companies. From underground utilities to traffic lights, we've got you covered.

Who Uses Dispatch

Tailored for municipalities and infrastructure/utility companies, Dispatch empowers maintenance crews to schedule repairs, plan for inspections, and view assets on the map.

Managing Work Orders

- 1 Create a work order and assign it to a crew
- 2 Link the work order to an asset type (e.g. water, sewer)
- 3 Send automatic service request to subcontractors or engineers (e.g. for excavation safety review)
- 4 Upload photos and record key data during the work
- 5 Search and filter through your historic repairs and work orders

Automatic Reminders

For assets that require periodic inspections (e.g. fire hydrants), the app will send you an inspection reminder 7 days before the next inspection date, so you can plan for it.

GIS Map

- 1 Locations of all completed, ongoing or scheduled work orders
- 2 Locations of periodic inspections due within the next 7 days
- 3 Locations of the works scheduled for today
- 4 Upload your local GIS maps (kml, json, etc.)

Asset Management

Whether your organization manages underground utilities, light poles, signs or any other types of assets, you can upload the list of assets to your Dispatch account and view them on GIS map. For assets requiring periodic inspections, you can specify how often the asset should be inspected. Dispatch will send you reminder 7 days before an inspection is due.

Plan for Future

With the state-of-the-art heat map technology, the Dispatch app uses your historic repair data to show you the locations with the most repairs. This helps you identify the 'weak points' of the network of assets and plan for the future.

We develop specialized software solutions for communities. Anything from tutoring app to sophisticated work order & asset management software is developed to make your life easier.

Our clients include municipalities and government organizations as well as utility companies.
